

Facteurs d'ajustement pour 2012-13 de la subvention pour le fonctionnement et la réfection des installations scolaires

Tel qu'annoncé par la note de service 2012 : B5 au sujet des SBE de 2012-13, le ministère a mis à jour les repères servant au calcul de la subvention pour le fonctionnement et la réfection des installations scolaires.

Les données sous-jacentes provenant du système d'information sur les installations scolaires (SIIS) ayant servies à mettre à jour le facteur relatif à la superficie supplémentaire ainsi que le facteur d'âge des écoles (plus ou moins 20 ans) sont maintenant disponible dans ce document.

Vous y trouverez un survol technique de la méthodologie de calcul de ces deux facteurs et les données sous-jacentes telles qu'extraites pour chaque conseil du SIIS. Veuillez employer la table des matières pour afficher les données de votre conseil. Pour toutes questions au sujet de cette mise à jour, veuillez contacter Hitesh Chopra par courriel à hitesh.chopra@ontario.ca ou par téléphone au 416-325-1887.

Sommaire Technique

En 2012-13, le ministère a mis à jour des facteurs clés par conseil s'appliquant à la subvention pour le fonctionnement et la réfection des installations scolaires.

Mises à jour clés

1. Âge des écoles
2. Facteur relatif à la superficie supplémentaire des écoles (FRSSE)
3. Facteur d'âge des écoles (plus ou moins de 20 ans)

Âge des écoles

Aux fins de calcul du FRSSE révisé et du coût repère pour la réfection des écoles (plus ou moins de 20 ans), le Ministère a élaboré une moyenne pondérée de l'âge des écoles afin d'avoir une meilleure idée de l'âge de chaque école. L'âge du bâtiment original et des agrandissements permanents est pondéré par la surface de plancher brute. L'exemple ci-dessous montre la façon dont l'âge moyen pondéré est calculé.

Exemple : Calcul de l'âge d'une école

Historique de construction	Âge	Surface de plancher brute	Âge x surface
Construction originale	40	1,000	40,000
Agrandissement	20	1,500	30,000
Agrandissement	10	3,000	30,000
Démolition	40	-500	-20,000
Agrandissement	2	500	1,000

Surface de plancher brute totale: 5,500

Âge x surface totale: 81,000

Âge moyen pondéré: $81,000 / 5,500 = 14.73$

Facteur relatif à la superficie supplémentaire des écoles (FRSSE)

La révision du FRSSE de chaque conseil scolaire reflète les données actuelles (année scolaire 2010 2011, en date du 31 août 2011), les nouveaux repères et les nouvelles méthodes mises au point. La dernière mise à jour de FRSSE des conseils scolaires eu lieu en 2001 2002; il était calculé en divisant la capacité totale par la superficie totale, ce qui donnait la superficie par élève du conseil scolaire.

Le FRSSSE mis à jour est toujours fondé sur la capacité du conseil scolaire, mais la surface de plancher brute des écoles ayant un âge moyen pondéré de 10 ans ou moins peut maintenant faire l'objet d'ajustements. Le calcul de la superficie par élève de ces écoles a été ajusté pour refléter la plus petite des deux superficies suivantes : la superficie réelle par élève de l'école et les repères variables de superficie pour la construction introduits en juin 2011 (note de service 2011: B6).

Les sous-ensembles d'écoles suivants seront exemptés de ce rajustement :

- les écoles élémentaires de moins de 200 places;
- les écoles secondaires de moins de 300 places;
- les écoles secondaires pour lesquelles le repère variable est inférieur à la superficie repère requise de 12,07 m² par élève.

Pour les deux premiers sous-ensembles, la surface réelle de plancher hors œuvre brute servira au calcul puisque le ministère ne dispose d'aucun repère de superficie pour la construction des écoles de cette taille. Quant au dernier sous ensemble, la surface de plancher hors œuvre brute sera rajustée en fonction de la plus petite des deux superficies suivantes : la superficie réelle par élève ou la superficie repère requise par élève de 12,07 m² (écoles secondaires). Cela signifie qu'aux fins du calcul du FRSSSE, la valeur de la surface de plancher hors œuvre brute ne pourra être inférieure à la superficie repère requise dans les écoles élémentaires (9,79 m²) ou dans les écoles secondaires (12,07 m²). Le tableau suivant illustre un exemple de la façon dont le FRSSSE est calculé selon la nouvelle méthode.

Lors du calcul du FRSSSE, le Ministère a considéré différemment les écoles dont l'âge moyen pondéré est de 10 ans ou moins, afin de tenir compte des repères de superficie pour la construction qui ont été introduits il y a 12 ans. Les conseils scolaires devraient avoir construit leurs écoles selon ces repères de superficie. Toutefois, le Ministère appliquera les repères variables de superficie pour la construction introduits en juin 2011 lorsqu'il déterminera la surface de plancher brute. Le repère de superficie par élève actuel de 9,70 m² au palier élémentaire a été appliqué dans cette mise à jour; seules les écoles considérées comme des actifs du conseil scolaire (durée de vie restante) ont été pris en considération.

Exemple : Calcul du FRSSSE au palier élémentaire

Écoles du conseil scolaire	Âge moyen pondéré	Capacité réelle	Calcul de la superficie ajusté [Superficie par élève = (Surface / Capacité réelle)]	Surface de plancher brute
XX	25	210	= 2,431 m ² / 210 places = 11.58 m ² / place	2,431 m ²
YY	5	465	Réel Surface: = 5,100 m ²	La surface de plancher brute

Écoles du conseil scolaire	Âge moyen pondéré	Capacité réelle	Calcul de la superficie ajusté [Superficie par élève = (Surface / Capacité réelle)]	Surface de plancher brute
			<p>Capacité réelle: = 465 places</p> <p>Superficie par élève: = 5,100 / 465 = 10.97 m²/place élève</p> <p>Repère variable: Capacité réelle = 465 pupil places</p> <p>Nouvelle superficie variable par élève = 10.35 m²/ place</p> <p>Surface ajustée: = Capacité réelle x Superficie variable par élève = 465 x 10.35 = 4,813 m²</p>	<p>ajustée pour cette école serait utilisée pour calculer le FRSSSE du palier élémentaire du conseil scolaire: 4,813 m²</p> <p>Prendre la plus petite surface de plancher brute entre 5 100 et 4 813 m²</p>
ZZ	3	620	<p>Réel Surface: = 6,070 m²</p> <p>Capacité réelle: = 620 places</p> <p>Superficie par élève: = 6,070 / 620 = 9.79 m²/per pupil place</p> <p>Repère variable: Capacité réelle = 620 pupil places</p> <p>Nouvelle superficie variable par élève = 10.12 m²/ place</p>	<p>La surface de plancher brute non ajustée de cette école serait utilisée pour le calcul du FRSSSE au palier élémentaire du conseil scolaire : 6,070 m²</p> <p>Prendre la plus petite surface de plancher brute entre 6 070 et 6 295 m²</p>

Écoles du conseil scolaire	Âge moyen pondéré	Capacité réelle	Calcul de la superficie ajusté [Superficie par élève = (Surface / Capacité réelle)]	Surface de plancher brute
			Surface ajustée: = Capacité réelle x Superficie variable par élève = 620 x 10.12 = 6,295 m ²	

Total Capacité réelle = 1,295

$$\begin{aligned} \text{FRSSE} &= (\text{Surface/capacité réelle}) / \text{Repère de superficie par élève} \\ &= (13,314 \text{ m}^2 / 1,295) / 9.7 \text{ m}^2 = 1.060 \end{aligned}$$

Facteur d'âge des écoles (plus ou moins de 20 ans)

La révision du facteur d'âge reflète les données actuelles (année scolaire 2010-2011, en date du 31 août 2011), les nouveaux repères et les méthodes mises au point. Ce facteur d'ajustement propre à chaque conseil scolaire a été mis à jour la dernière fois en 2001-2002.

- Le coût repère pour la réfection des écoles de moins de 20 ans a été augmenté à 7,59 \$ le m².
- Le coût repère pour la réfection des écoles de 20 ans ou plus a été augmenté à 11,38 \$ le m².

Cet ajustement tient compte du calcul de l'âge moyen pondéré afin de déterminer si une école a moins ou plus de 20 ans. Cette approche reflétera davantage l'âge véritable des écoles d'un conseil
