

Smart FIR Support Memo

Topic

Macros are Disabled

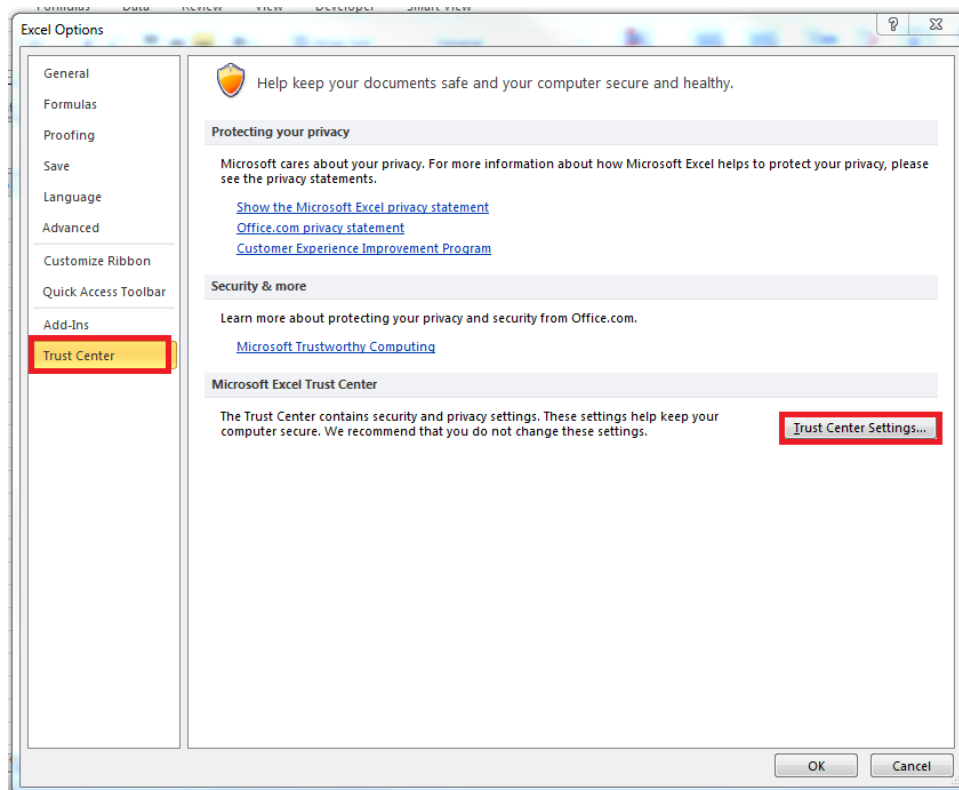

Response

SmartFIR is an .xlsm (workbook with macros) file and will not function properly if macros are not enabled.

Users are usually presented with option when opening Excel to enable macros when .xlsm files are opened.

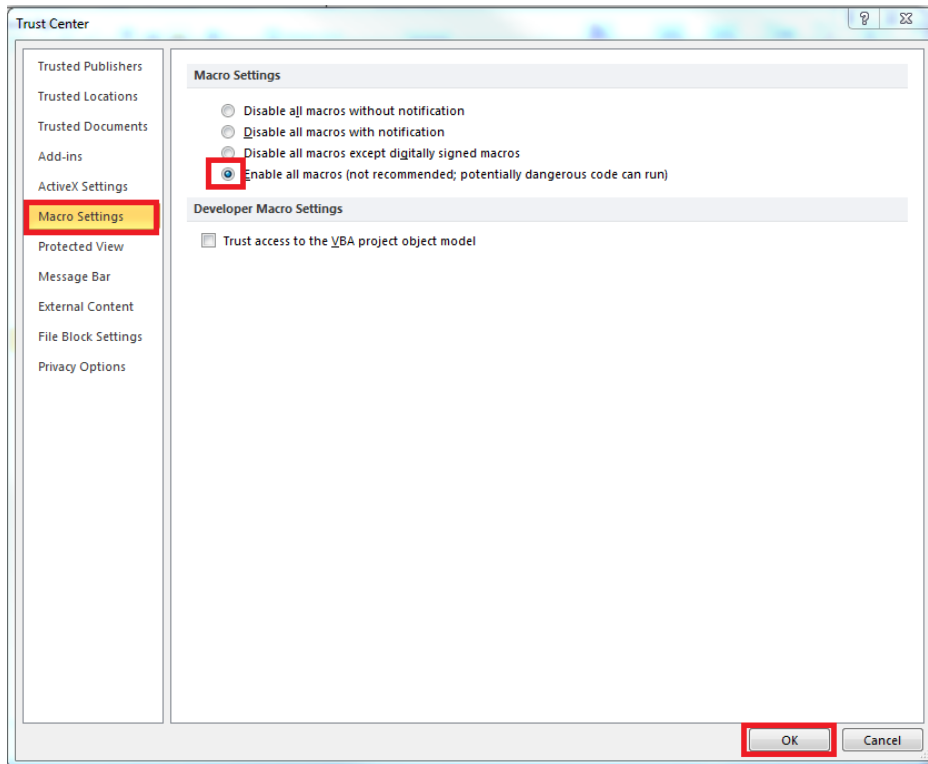

To prevent this issue from happening, enable macros for all files by navigating in Microsoft Excel to:

File --> Options --> Trust Center --> Trust Center Settings --> Macro Settings.

For Further information please contact FIR.MMAH@Ontario.ca

Select --> Macro --> “Enable all macros” button --> OK and restart Excel.
